

Agri-Tech's Late Spring Newsletter (May - June)

Agri-Tech applies the Late Spring Service during May - June. This treatment consists of fertilizer and we will spray weeds if present in the lawn. The treatment will increase overall color and thick growth characteristics, while controlling weeds.

During this time of year, most grasses will begin seed-head production. This tends to resemble weed-like characteristics and sometimes often being referred to looking like "wheat". This is a normal process the grass goes through every season. It is very temporary, usually lasting approximately 2-3 weeks.

Also during the late spring months, almost all lawns will experience "Red Thread Disease". This disease typically lasts 2-3 weeks and does not cause any permanent damage. The affected areas tend to be brown patches and the tips of the affected grass are red in color resembling red colored sewing thread, hence it's name "Red Thread". The disease can be easily spread by mowing. The Late Spring fertilizer treatment will aid in recovery and help to grow out the affected grass plants.

All of our Technicians have been certified by the State of New Jersey to apply pesticides and fertilizer treatments to residential and commercial properties. The Service Technicians have been trained according to the guidelines provided to us.

We hope the website gives you plenty of information and answers your concerns. On our FAQ page, you will find answers to over 30 questions. On our Home Page you can "LIKE" us on FaceBook for tips, reminders and updates.

Our hours are 9am-5pm, Monday – Friday. Please contact us with any and all questions/concerns.

We thank you for your business,

Agri-Tech Staff
