

Agri-Tech's Summer Newsletter (July - August)

During the summer weather, Agri-Tech will be applying a slow-release fertilizer. 50% of the fertilizer will release when it's watered, the other 50% will release after about 3 weeks. The reason we use this type of fertilizer during the summer is to eliminate the potential for fertilizer burn to the lawn. We will also be applying a surface feeding insect control. If you are scheduled for a grub control, this treatment is applied in addition with summer fertilization application.

Please refer to the Watering & Mowing Guide for overall appearance, especially during the summer months. Your Service Technician will leave a copy of the guide for you during the season. Should you need another copy, please visit the "News/Updates" page on the website. You can print it for easy reference.

Over the next few months, Agri-Tech will be evaluating lawns for seeding needs. Supreme Care Customers will automatically be scheduled for seeding, where applicable. If you are on our Base Care Program, your Service Technician will evaluate the lawn for seed needs and advise you to call the office for a price if it's needed.

If your lawn is experiencing any discoloration or weed growth, please call the office to schedule a service call. We will evaluate the lawn and diagnose any problems. Weed control will be applied, where needed, at no cost to customers who are on a full Base or Supreme Program.

We appreciate the confidence you have placed in us,
